

VII. Military expenditure data, 2002–11

SAM PERLO-FREEMAN, OLAWALE ISMAIL, NOEL KELLY,
ELISABETH SKÖNS, CARINA SOLMIRANO AND HELEN WILANDH

The following tables contain data on military expenditure in local currency at current prices (table 4.8), constant (2010) US dollars (table 4.9) and as a share of gross domestic product (table 4.10) for the 166 countries covered by the SIPRI Military Expenditure Database, <<http://www.sipri.org/data/bases/milex/>>.

The main purpose of the data on military expenditure is to provide an easily identifiable measure of the scale of resources absorbed by the military. Military expenditure is an ‘input’ measure, which is not directly related to the ‘output’ of military activities, such as military capability or military security. Long- and short-term changes in military spending may be signs of a change in military output, but interpretations of this type should be made with caution.

The country data on military expenditure in local currency (table 4.8) is the original data for all the other tables. This data is provided to contribute to transparency and to enable comparison with data reported in government sources and elsewhere. Data in constant dollars is provided to allow for comparison over time (table 4.9) and for calculating world, regional and other totals (see table 4.1). Data in current dollars for 2011 is provided to allow international comparison across countries (table 4.9) and across regions (table 4.1). The current dollar figures also facilitate comparison with other economic indicators, which are often expressed in current dollar terms. Data on military expenditure as a share of GDP is provided (in table 4.10) as an indicator of the proportion of a country’s resources used for military activities, that is, as an indicator of the economic burden of military expenditure—the ‘military burden’.

Conversion to constant US dollars has been made using market exchange rates. As the base year for conversion to constant US dollars used here is 2010, the figures in table 4.9 are substantially different from those in *SIPRI Yearbook 2011*, where the base year 2009 was used.

Military expenditure data from different editions of the SIPRI Yearbook should not be combined because the data series are continuously revised and updated as new and better data becomes available. This is true in particular for the most recent years as figures for budget allocations are replaced by figures for actual expenditure. Revisions in constant dollar series can also be caused by revisions in the economic statistics used for these calculations. The SIPRI Military Expenditure Database includes consistent series dating back to 1988 for most countries.

Further notes and the sources and methods for the data follow the tables.

Table 4.8. Military expenditure by country, in local currency, 2002–11

Figures are in local currency at current prices. Years are financial years (Jan.–Dec. except where indicated). Countries are grouped by region and subregion.

Notes: See below table 4.10.

Table 4.9. Military expenditure by country, in constant US dollars for 2002–11 and current US dollars for 2011

Figures are in US\$ m. at constant (2010) prices and exchange rates for 2002–11 and, in the right-most column, marked *, in current US\$ m. for 2011. Years are calendar years except for the USA, where the figures are for financial years. Countries are grouped by region and subregion.

.. = not available or not applicable; - = nil or a negligible value; () = uncertain figure; [] = SIPRI estimate; / = change of financial year (FY); ||| = series break (figures before this symbol may not be connected to figures after the symbol).

^a The FY runs from Apr. of the year indicated to Mar. of the following year.

^b The FY runs from July of the year indicated to June of the following year.

[†] All figures exclude military pensions.

[‡] All figures are for current spending only (i.e. exclude capital spending).

[§] All figures are for the adopted budget, rather than actual expenditure.

[¶] All figures exclude spending on paramilitary forces.

^{||} This country changed or redenominated its currency during the period; all figures have been converted to the latest currency.

¹ The figures for Algeria are budget figures from 2004. In July 2006 the Algerian Government issued supplementary budgets increasing total government expenditure by 35%. It is not clear if any of these extra funds were allocated to the military.

² The figures for Libya do not include development expenditure, which in 2008 was 1000 million dinars.

³ The rate of implementation of Angola's budget can vary considerably. Military expenditure for Angola should be seen in the context of highly uncertain economic statistics due to the impact of war on the Angolan economy.

⁴ The figures for the Central African Republic do not include investment expenditure, which in 2005 totalled 775 000 CFA francs.

⁵ Chad's military expenditure increased sharply after 2005 due to conflict in the east of the country, with exceptional military expenditure financed by oil revenues. Figures for 2006 are not available, but available information suggests a large increase over 2005 followed by a smaller increase between 2006 and 2007.

- ⁶ The figures for the Democratic Republic of the Congo (DRC) do not include profits from extensive military-run mining operations.
- ⁷ The figures for Côte d'Ivoire for 2003 are for budgeted spending rather than actual expenditure.
- ⁸ The figures for Gabon exclude off-budget spending financed by the Provisions pour Investissements Hydrocarbures (PIH), an investment fund based on tax revenues from foreign oil companies active in Gabon.
- ⁹ The 2009 budget speech by the Gambian Minister of Finance gave figures for the Ministry of Defence (MOD) budget of 381 million dalasis for 2008 and 189 million dalasis for 2009. However, these figures represent a different definition of military expenditure than earlier figures and would imply a much higher increase in spending in 2008 than is likely to be the case, so they cannot be used to form a consistent series.
- ¹⁰ The figures for Ghana from 2006 are for the adopted budget rather than actual spending.
- ¹¹ The figures for Guinea might be an underestimate as the IMF reports large extra-budgetary spending for the military.
- ¹² The figures for Madagascar include expenditure for the gendarmerie and the National Police.
- ¹³ The figures for Mali are for defence and security.
- ¹⁴ Mauritius changed its FY in 2010 from July–June to Jan.–Dec. A transitional 6-month FY applied from July–Dec. 2009, for which data is not available.
- ¹⁵ The figures for Namibia for 2002 include a supplementary allocation of 78.5 million Namibian dollars.
- ¹⁶ Rwanda changed its FY in 2009 from Jan.–Dec. to July–June. The local currency figure for Rwanda for 2009 is the sum of a special 6-month budget for Jan.–June 2009 (20.6 billion Rwandan francs) and the first full July–June FY of 2009/10 (43.6 billion Rwandan francs). The figures for 2005 and 2006 include allocations for African Union (AU) peace operations.
- ¹⁷ South Sudan became independent from Sudan on 9 July 2011. Between July 2005 and July 2011 southern Sudan was governed by the autonomous Government of Southern Sudan under the terms of the 2005 Comprehensive Peace Agreement. Figures for 2006–10 are the military spending of the Government of Southern Sudan on the Sudan People's Liberation Army (SPLA).
- ¹⁸ The figures for Sudan are for defence and security. The figures for 2006–10 exclude spending by the Government of Southern Sudan. See also note 17.
- ¹⁹ The figures for Swaziland for 2008–11 are based on an estimated share of the Defence, Public Order and Safety budget and are highly uncertain.
- ²⁰ Zimbabwe abandoned the Zimbabwean dollar in Apr. 2009 and now operates a multiple currency regime, where US dollars, British pounds and South African rands, amongst others, may all be used for transactions. Government budget statistics are provided in US dollars. Local currency figures for Zimbabwe are given in Zimbabwean dollars up to 2007 and in US dollars from 2010. Hyperinflation means that the figures for 2006 and 2007 are highly uncertain and no meaningful price data is available for 2008, so it is not possible to provide a single constant price series. The constant dollar figures are therefore given in constant 2005 US dollars up to 2007, and in constant 2010 US dollars for 2010 and 2011. These two series cannot be joined.
- ²¹ Costa Rica has no armed forces. Expenditure for paramilitary forces, border guards, and maritime and air surveillance is less than 0.05% of GDP.
- ²² Figures for Cuba are for defence and internal order. The figures shown in table 4.9 are for current US dollars, converted at the official exchange rate for each year, instead of constant (2010) US dollars, due to the lack of reliable inflation data for Cuba. Data for military expenditure as a share of GDP is not given due to the lack of reliable GDP data for Cuba.

²³ The figures for El Salvador include military pensions from the Armed Forces Pensions Fund for 2002–10. The figure for 2011 includes an estimate of \$75 million for pensions. The pensions figures may be slightly overestimated as they include financial investments by the fund, which was \$17 million in 2010.

²⁴ The figures for Honduras do not include expenditure on arms imports.

²⁵ The figures for Nicaragua include military aid from Taiwan and the USA for the years 2002–2009 of 12.5, 16.9, 13.6, 11.1, 7.3, 28.8, 12.2 and 11.6 million cordobas, respectively.

²⁶ All figures for the USA are for FY (1 Oct. of the previous year to 30 Sep. of the stated year), rather than calendar year.

²⁷ The Argentinian Congress did not approve a budget for 2011. Ministries are therefore officially operating on the 2010 budget and so the SIPRI estimate for 2011 in local currency is identical to the figure for 2010 in current prices. However, expert sources suggest that actual expenditure in 2011 may be considerably higher.

²⁸ The figures for Bolivia include some expenditure for civil defence.

²⁹ The figures for Chile include direct transfers from the state-owned copper company Corporacion Nacional del Cobre (CODELCO) for military purchases. Since 2004 the MOD has built up a surplus from unspent portions of these transferred funds, which in 2011 were placed in a Strategic Contingency Fund for future equipment spending. The SIPRI figures continue to count the transfers from CODELCO rather than actual spending.

³⁰ The figures for Colombia for 2002–2007 include special allocations totalling 2.5 billion pesos from a war tax decree of 12 Aug. 2002. Most of these allocations were spent between 2002 and 2004.

³¹ The figures for Guyana do not include capital expenditure, which for 2003–2006 was 147, 154, 155 and 172 million Guyanese dollars, respectively.

³² The figures for Paraguay in 2003 are for the modified budget, rather than actual expenditure. Spending on military pensions is not included; for the years 2007–11 it was 208, 239.3, 271.7, 293.9 and 340 billion guaraníes, respectively.

³³ The figures for Peru from 2005 do not include the transfer of 20% of gas production revenues from the state-owned company CAMISEA for the armed forces and national police.

³⁴ In previous editions of the SIPRI Yearbook, the figures for Uruguay excluded military pensions. The inclusion of spending on pensions means that the figures presented here are substantially higher than those published in previous editions.

³⁵ The figures for Venezuela exclude an unknown amount of additional funding from the National Development Fund (FONDEN), created in 2005 and funded by contributions from the Central Bank and the state oil company, PDVSA.

³⁶ Afghanistan's FY runs from Mar. to Feb. The figures are for core budget expenditure on the Afghan National Army. Military aid from foreign donors—which in 2009 included \$4 billion from the USA, 16 times Afghanistan's domestic military expenditure—is not included.

³⁷ The figures for India include expenditure on the paramilitary forces of the Border Security Force, the Central Reserve Police Force, the Assam Rifles, the Indo-Tibetan Border Police and, from 2007, the Sashastra Seema Bal, but do not include spending on military nuclear activities.

³⁸ The figures for Kyrgyzstan include spending on internal security, which accounts for a substantial part of total military spending.

³⁹ The figures for Pakistan do not include spending on paramilitary forces—the Frontier Corps (Civil Armed Forces) and Pakistan Rangers. For 2008, 2009 and 2010, this totalled 16.7, 20.8 and 31.4 billion rupees, respectively. The figures also exclude defence spending in the Public Sector Development Plan, which in 2008–II was 2.3, 5, 3.9 and 2.1 billion rupees, respectively.

⁴⁰ The figures for Uzbekistan expressed in constant US dollars should be seen in the light of considerable differences between the official and the unofficial exchange rates.

⁴¹ The figures for China are for estimated total military expenditure, including estimates for items not included in the official defence budget. They are based on (a) publicly available figures for official military expenditure and for certain other items; (b) estimates based on official data and the methodology of Wang, S., 'The military expenditure of China, 1989–98', *SIPRI Yearbook 1999*; and (c) for the most recent years, where no official data is available for certain items, either the percentage change in official military expenditure, recent trends in spending in the same category, or, in the case of the commercial earnings of the People's Liberation Army (PLA), on the assumption of a gradual decrease. See 'Sources and methods' below.

⁴² The figures for Japan are for the adopted budget before 2004 and for 2010–II. The figures include the budgeted amount for the Special Action Committee on Okinawa (SACO) and exclude military pensions.

⁴³ The figures for North Korea are as reported by North Korean authorities. They do not include investment in the arms industry and R&D in dual-use technology, or various social welfare services provided through the military sector. Due to lack of a credible exchange rate between the North Korean won and the US dollar, no dollar estimates can be provided.

⁴⁴ The figures for South Korea do not include spending on 3 'special funds' for relocation of military installations, relocations of US bases and welfare for troops. These totalled 449.3, 1048.8 and 1285.2 billion won in 2009, 2010 and 2011, respectively.

⁴⁵ Fiji's spending on military pensions for 1998–2002 was roughly 3.5% of annual military spending.

⁴⁶ Figures for Papua New Guinea are for the recurrent part of the budget. For the years 2008–II, development expenditure was 6, 25.2, 0 and 47 million kina, respectively.

⁴⁷ The local currency figure for Brunei Darussalam for 2003 is for a special 15-month FY from Jan. 2003 to Mar. 2004. FYs up to 2002 are Jan.–Dec, those from 2004 onwards are Apr.–Mar.

⁴⁸ The figures for Indonesia exclude substantial off-budget expenditure, the size of which is unknown.

⁴⁹ The figures for Myanmar are not presented in US dollar terms owing to the extreme variation in stated exchange rate between the kyat and the US dollar.

⁵⁰ The figures for the Philippines are slightly overstated as they include spending on Veterans Affairs. Up to 2010 this amounted to no more than c. 1 billion pesos annually, but in 2011 this increased to 13.9 billion pesos.

⁵¹ The local currency figure for Timor-Leste for 2007 is for a special 6-month FY July–Dec. 2007. Previous FYs, up to 2006/2007, are July–June; FYs from 2008 are Jan.–Dec. The figures for military expenditure as a share of GDP are based on GDP data that excludes oil and gas revenues, which in recent years have been several times higher than this measure of GDP.

⁵² If the figures for Armenia were to include military pensions they would be 15–20% higher.

⁵³ The figures for Azerbaijan for 2011 include an allocation of 1087 million manats for 'Special defence projects' in addition to the main defence budget.

- ⁵⁴ The budget figures for Georgia for 2003 are believed to be an underestimation of actual spending because of the political turmoil during the year.
- ⁵⁵ Adding all military items in Moldova's budget, including expenditure on military pensions and paramilitary forces, would give total military expenditure for 2005, 2006 and 2007 of 343, 457 and 530 million lei, respectively.
- ⁵⁶ For the sources and methods of the military expenditure figures for Russia see Cooper, J., 'The military expenditure of the USSR and the Russian Federation, 1987–97', *SIPRI Yearbook 1998*.
- ⁵⁷ The figures for Albania prior to 2006 do not fully include pensions. The figures in 2007, 2008 and 2011 are for the modified budget.
- ⁵⁸ The figures for Bosnia and Herzegovina from 2005 onwards are for the armed forces of Bosnia and Herzegovina, which was formed in 2005 from the Croat–Bosniak Army of the Federation of Bosnia and Herzegovina and the Bosnian Serb Army of Republika Srpska. The figures prior to 2005 include expenditure for the Army of the Federation of Bosnia and Herzegovina and the Army of Republika Srpska. The figures do not include spending on arms imports.
- ⁵⁹ According to NATO figures, Bulgaria's total spending, including pensions, was 1393, 1712 and 1749 million leva in 2006, 2007 and 2008, respectively.
- ⁶⁰ The figures for Croatia for 2006–10 include sums allocated from central government expenditure for repayments on a loan for a military radar system. The sums allocated were 147.8, 91.4, 53.2, 54.6 and 55.2 million koruny, respectively. Payments continued in 2011, but figures have not been provided, so an estimate equal to the 2010 figure (55.2 million koruny) has been included.
- ⁶¹ The figures for the Czech Republic do not include military aid to Afghanistan or Iraq. Aid to Afghanistan was 18.7 million koruny in 2004 and 612.6 million koruny in 2007. Aid to Iraq was 1.1 million koruny in 2005.
- ⁶² The Estonian Border Guard Service merged with the National Police in 2010, and it is no longer classed as a paramilitary force by SIPRI. This accounts for much of the decrease in Estonian military spending in 2010.
- ⁶³ The figures for France from 2006 are calculated with a new methodology due to a change in the French budgetary system and financial law.
- ⁶⁴ Iceland does not have an army or other military. Until the establishment of the Icelandic Defence Agency in June 2008 there was no budget for defence or military affairs. The Icelandic Defence Agency is responsible for maintaining defence installations such as the Icelandic Air Defence System, intelligence gathering and military exercises.
- ⁶⁵ The figures for Italy include spending on civil defence, which typically amounts to about 4.5% of the total.
- ⁶⁶ Due to a change in the way Lithuania reports spending on paramilitary forces, it is possible that the figures up to 2003 include spending on some forces not included from 2004.
- ⁶⁷ The definition of military expenditure for the Former Yugoslav Republic of Macedonia changed from 2006. Border troops were transferred from the MOD to the Ministry of Interior Affairs and part of the military pensions, previously entirely excluded, are now included.
- ⁶⁸ Montenegro declared its independence from the State Union of Serbia and Montenegro on 3 June 2006. See also note 70.
- ⁶⁹ The figures for Poland exclude some defence spending in other ministries, and additional domestic defence spending such as the Armed Forces Modernization Fund and some additional defence R&D. Between 2004 and 2011 these additional sums varied between 240 million and 640 million zlotys.
- ⁷⁰ Montenegro seceded from the State Union of Serbia and Montenegro on 3 June 2006. The figures for Serbia up to 2005 are for Serbia and Montenegro (known as the Federal Republic of Yugoslavia until Feb. 2003) and for 2006 onwards for Serbia alone.

⁷¹ Figures for Switzerland do not include spending by cantons and local government. In 1990–2006, military spending by cantons and local government typically amounted to 5–8% of the central government spending figures.

⁷² The figures for Bahrain do not include extra-budgetary spending on defence procurement.

⁷³ The figures for Iran do not include spending on paramilitary forces such as the Islamic Revolutionary Guards Corps (IRGC).

⁷⁴ In recent years, the Iraqi MOD has substantially underspent its budget. The figures for Iraq for 2011 should therefore be treated with caution. The figures up to 2007 are uncertain due to the high rate of inflation.

⁷⁵ The figures for Israel include supplemental budgets for operations in the Palestinian territories and elsewhere and an estimate for the paramilitary Border Police.

⁷⁶ The figures for Oman are for expenditure on defence and national security. In 2011 the government enacted a supplemental budget of 1000 million rials, equal to 12% of the original total budget, but it is not known if any of this additional allocation went to military spending.

⁷⁷ The figures for Qatar are for expenditure on defence and security.

⁷⁸ The figures for Saudi Arabia are for expenditure on defence and security.

⁷⁹ The figures for Syria in US dollars have been converted from local currency using the market exchange rate for the base year of 2010 of \$1 = 46.422 Syrian pounds. Previously, Syria operated an official exchange rate of \$1 = 11.225 Syrian pounds, which was used in editions of the SIPRI Yearbook up to 2009. Syria abolished the official rate in 2007, moving to the parallel market rate that had previously operated unofficially.

⁸⁰ The military expenditure of the United Arab Emirates is uncertain and lacking in transparency. The only available sources of data are IMF Staff Country Reports and the IMF's *Government Finance Statistics*. The Country Reports include 2 lines relating to military expenditure: the Goods and Services expenditure of the Defence and Interior ministries (which does not include military wages, salaries and pensions), and Abu Dhabi Federal Services, which the reports say are mainly defence and security expenditure. *Government Finance Statistics* gives only the Goods and Services figures. The SIPRI figures are estimated as 80% of the Abu Dhabi Federal Services item, plus 100% of the Goods and Services figures. The latter item is estimated for 2006–10 assuming a constant real value.

Sources and methods

The definition of military expenditure

The guideline definition of military expenditure used by SIPRI includes expenditure on the following actors and activities: (a) the armed forces, including peacekeeping forces; (b) defence ministries and other government agencies engaged in defence projects; (c) paramilitary forces, when judged to be trained and equipped for military operations; and (d) military space activities. It includes all current and capital expenditure on (a) military and civil personnel, including retirement pensions of military personnel and social services for personnel; (b) operations and maintenance; (c) procurement; (d) military research and development; and (e) military aid (in the military expenditure of the donor country). It does not include civil defence and current expenditure for past military activities, such as for veterans' benefits, demobilization, conversion and weapon destruction. While this definition serves as a guideline, in practice it is often difficult to adhere to due to data limitations.

Limitations of the data

There are three main types of limitation of the data: reliability, validity and comparability.

The main problems of reliability are due to the less than comprehensive coverage of official military expenditure data, the lack of detailed information on military expenditure and the lack of data on actual, rather than budgeted, military expenditure. In many countries the official data covers only a part of total military expenditure. Important items can be hidden under non-military budget headings or can even be financed entirely outside the government budget. Many such extra-budgetary and off-budget mechanisms are employed in practice.

The validity of expenditure data depends on the purpose for which it is used. Since expenditure data is a measure of monetary input, its most valid use is as an indicator of the economic resources consumed for military purposes. For the same reason, its utility as an indicator of military strength or capability is limited. While military expenditure does have an impact on military capability, so do many other factors such as the balance between personnel and equipment, the technological level of military equipment, and the state of maintenance and repair, as well as the overall security environment in which the armed forces are to be employed.

The comparability of the data is limited by two different types of factor: the varying coverage (or definition) of the data and the method of currency conversion. The coverage of official data on military expenditure varies significantly between countries and over time for the same country. For the conversion into a common currency, the choice of exchange rate makes a great difference in cross-country comparisons (see below). This is a general problem in international comparisons of economic data and is not specific to military expenditure. However, since international comparison of military expenditure is often a sensitive issue, it is important to bear in mind that the interpretation of cross-country comparisons of military expenditure is greatly influenced by the choice of exchange rate.

Methods

SIPRI data is based on open sources and reflects the official data reported by governments. However, the official data does not always conform to the SIPRI definition of military expenditure. Nor is it always possible to recalculate data according to the definition, since this would require detailed information about what is included in the official defence budgets and about extra-budgetary and off-budget military expenditure items. In many cases SIPRI is confined to using the data provided by governments, regardless of definition. If several data series are available, which is often the case, SIPRI chooses the data series that corresponds most closely to the SIPRI definition of military expenditure. Nevertheless, priority is given to choosing a uniform time series for each country, in order to achieve consistency over time, rather than to adjusting the figures for individual years according to a common definition. In addition, estimates have to be made in specific cases.

Estimation. Estimates of military expenditure are predominantly made (a) when the coverage of official data diverges significantly from the SIPRI definition or (b) when no complete consistent time series is available. In the first case, estimates are made on the basis of an analysis of primarily official government budget and expenditure accounts. The most comprehensive estimates of this type are for China (as presented in *SIPRI Yearbook 1998* and updated in *SIPRI Yearbook 2011*) and Russia (as presented in *SIPRI Yearbook 1999*). In the second case, when only incomplete time series are available, the figures from the data series which corresponds most closely to the SIPRI definition are used for the years covered by that series. Figures for the missing years are then estimated by applying the percentage change between years in an alternative series to the data in the first series, in order to achieve consistency over time.

All estimates are based on official government data or other empirical evidence from open sources. Thus, no estimates are made for countries that do not release any official data, and no figures are displayed for these countries.

SIPRI estimates are presented in square brackets in the tables. Round brackets are used when data is uncertain for reasons beyond SIPRI's control, for example, when the data is based on a source of uncertain reliability and in cases when data expressed in constant dollars or as shares of GDP is uncertain due to uncertain economic data.

The data for the most recent years includes two types of estimate, which apply to all countries. First, figures for the most recent years are for adopted budget, budget estimates or revised estimates, the majority of which will be revised in subsequent years. Second, in table 4.9 the deflator used for the final year in the series is an estimate based on part of a year or as provided by the International Monetary Fund (IMF). Unless exceptional uncertainty is involved, these estimates are not bracketed.

The totals for the world, regions, organizations and income groups in table 4.1 are estimates because data is not available for all countries in all years. In cases where data for a country is missing at the beginning or end of the series, these estimates are made on the assumption that the rate of change for that country is the same as the average for the region to which it belongs. In cases where data is missing in the middle of the series, the estimates are made on the assumption of an even trend between the end values. When no estimate can be made, countries are excluded from all totals.

Calculations. The original country data is provided in local currency at current prices (table 4.8) for financial years. Those countries with financial years that do not coincide with calendar years are indicated in table 4.8. In all but one such case, the figure shown for a given year is for the financial year *beginning* in that calendar year. The exception is the USA, where each figure is for the financial year beginning on 1 October of the year previous to that indicated. A few countries changed their financial year during the period 2002–11. These cases are indicated in footnotes.

Figures in constant US dollars and as a share of GDP (tables 4.9 and 4.10) are displayed on a calendar year basis, which makes it necessary to convert financial year figures to calendar year figures for some countries. These calculations are made on the assumption of an even rate of expenditure throughout the financial year. Local currency data is then converted to US dollars at constant prices and exchange rates (table 4.9) using the national consumer prices index (CPI) for the respective country and the annual average market exchange rate (MER).

The use of CPIs as deflators means that the trend in the SIPRI military expenditure for each country (in constant dollars) reflects the real change in its purchasing power for country-typical baskets of civilian consumer goods. A military-specific deflator would be a more appropriate choice, but these are unavailable for most countries.

GDP-based purchasing power parity (PPP) exchange rates would be an alternative to MERs. PPP rates better represent the volume of goods and services that can be purchased with a given sum of money in each country than do MERs. However, they are not necessarily a better measure than MERs of the volume of *military* goods and services that may be obtained (as discussed in detail in *SIPRI Yearbook 2006*). In particular, PPP rates are unlikely to reflect

the relative costs of advanced weapons technology and systems in each country. In fact, military spending figures, whatever exchange rate is used, do not directly measure military capability. PPP rates thus do not give a 'better' indication of what a country is 'really' spending; rather, they measure what alternative volume of goods and services could be bought within the country in question if the money was used for other purposes. MERs on the other hand measure what the military spending could purchase on international markets. In addition to these issues, as PPP rates are estimates, they are less reliable than MERs. Thus, SIPRI uses market exchange rates to convert military expenditure data into US dollars, despite their limitations, as the simplest and most objective measure for comparing international spending levels.

Sources

The sources for military expenditure data are, in order of priority, (a) primary sources, that is, official data provided by national governments, either in their official publications or in response to questionnaires; (b) secondary sources that quote primary data; and (c) other secondary sources.

The first category consists of national budget documents, defence white papers and public finance statistics as well as responses to a SIPRI questionnaire that is sent out annually to the finance and defence ministries, central banks, and national statistical offices of the countries in the SIPRI Military Expenditure Database. It also includes government responses to questionnaires about military expenditure sent out by the United Nations and, if made available by the countries themselves, the Organization for Security and Co-operation in Europe (OSCE).

The second category includes international statistics, such as those of the North Atlantic Treaty Organization (NATO) and the IMF. The data for the 16 pre-1999 NATO member states has traditionally been taken from military expenditure statistics published in a number of NATO sources. The introduction by NATO of a new definition of military expenditure in 2005 has made it necessary to rely on other sources for some NATO countries for the most recent years. The data for many developing countries is taken from the IMF's *Government Finance Statistics Yearbook*, which provides a defence heading for most IMF member countries, and from country reports by IMF staff. This category also includes publications of other organizations that provide references to the primary sources used, such as the Country Reports of the Economist Intelligence Unit.

The third category of sources consists of specialist journals and newspapers.

The main sources for economic data are the publications of the IMF: *International Financial Statistics*, *World Economic Outlook* and country reports by IMF staff.

The SIPRI Military Expenditure Network

Contribution of military expenditure data, estimates and advice are gratefully acknowledged from Julian Cooper (University of Birmingham, Centre for Russian and East European Studies), Dimitar Dimitrov (University of National and World Economy, Sofia), Iñigo Guevara y Moyano (Colectivo de Análisis de la Seguridad con Democracia, Querétaro), Gülay Günlük-Şenesen (Istanbul University), Iduvina Hernández (Asociación para el estudio y la promoción de la seguridad en democracia, Guatemala City), Shir Hever (Alternative Information Center, Jerusalem), Pavan Nair (Jagruti Seva Sanstha, Pune), Elina Noor (Institute of Strategic and International Studies Malaysia, Kuala Lumpur), Tamara Pataraiia (Caucasus Institute for Peace, Democracy and Development, Tbilisi), Thomas Scheetz (Lincoln University College, Buenos Aires), Nerhan Yentürk (Istanbul Bilgi University), Tasheen Zayouna (International IDEA, Stockholm) and Ozren Zunec (University of Zagreb).
